

Sea Turtle Statements:

A single sea turtle may travel more than a thousand miles in one year's migration.

After more than twenty years at sea, female sea turtles return back to the same beach where they were born in order to dig a nest and lay their eggs.

A turtle can heal a person who is sick, and possibly allows the person to live a long life.

Sea turtles have been on earth more than 200 million years.

Eating sea turtle eggs makes a man stronger and more attractive to women.

Sea turtles navigate using the Earth's magnetic fields.

Sea turtles are so heartbroken about having to leave their young that they cry all the way back to the water.

The temperature of the sand where the turtle nests determines the sex of the hatchlings.

Many tribal peoples believe that the Earth moves through the heavens on the back of a great turtle.

Some believe the heavens were formed from the shell, the earth was created from its body and its undershell was the underworld.
